				Story Points		
Date	Issue	Event Type	Event Detail	Inc.	Dec.	Remaining
27/Aug/26 9:09 PM	Total	Sprint start				0
	GTESE-9	Scope change	Issue added to sprint	3		3
	GTESE-10	Scope change	Issue added to sprint	3		6
27/Aug/26 9:22 PM	GTESE-9	Burndown	Issue completed		3	3
	GTESE-10	Burndown	Issue completed		3	0
27/Aug/26 9:23 PM	GTESE-10	Sprint ended by Shivansh Sharma				0
	GTESE-9					0
	Total					0

Reflection Questions

Question 1

Did your estimations reflect the actual effort?

The Story Point estimations were generally reasonable for the relative complexity of the User Stories. More complex functionality such as computing the optimal debt settlement was assigned 8 Story Points, while simpler traveler-management tasks were assigned 3 Story Points. Since the Sprint was simulated in Jira, the Story Points provided a relative estimate of complexity rather than a measurement of actual development hours.

Question 2

Was your backlog well-prioritized?

Yes, the backlog was prioritized according to the importance and user impact of the functionality. Core expense management, currency conversion, debt settlement, and balance summary features were given High priority, while adding and removing travelers were given Medium priority. This allowed the most important financial functionality to be included in Sprint 1.

Question 3

How did your simulated sprint align with your plan?

The simulated sprints aligned well with the planned backlog. Sprint 1 contained five High-priority User Stories totaling 26 Story Points, and all five were moved from To Do to In Progress and then to Done. Sprint 2 contained the remaining two User Stories totaling 6 Story Points, and both were also completed successfully. Therefore, all planned User Stories were completed across the two simulated sprints.

Question 4

What insights did the burndown chart give about your team's capacity?

The Burndown Chart showed that the team was able to complete all 6 Story Points planned for Sprint 2. The remaining work decreased from 6 to 3 and finally to 0 as the two User Stories were completed. This indicates that the planned Sprint 2 workload was within the team's simulated capacity. However, because the Sprint was simulated and completed in a short period, the chart should be interpreted as a demonstration of Sprint progress rather than a measurement of real-world team velocity.
